The Control Panel option in the next figure allows you to access the Control Panel window by clicking on the System icon. The operating system component displays all the components that make up your computer system. When you click on one of them, the system window displays a complete list of all your installed software. All installed applications are categorized by their type and shown with the full name of the program and a description of the application as shown in the next figure. When you open the Control Panel, you can open and manage all your installed software from one place. Note: In order to open the Control Panel window, click on the Control Panel icon, that you can find in the Start menu as shown in the next figure. Uninstall programs You can remove installed applications by double clicking on their installed location or by clicking on their uninstall icon in the list of installed software. You can also browse through all your installed programs by selecting the Applications tab or the System tab. All programs in the list are sorted by type and name. Uninstall programs button When you click on the button, you get the system window as shown in the next figure where you can browse through all your installed programs. Here you can select the uninstall button for an installed program or remove all selected programs. You can also select the option to remove all updates of installed software. Clear settings and cache The Clear Settings and Cache option, as shown in the next figure, allows you to empty the system temporary files and remove all unused files. The Cache, found in the Temporary Files section of the Control Panel, allows you to remove temporary files, cookies, and any kind of cache stored on your computer. When you open the Temporary Files window, you can easily clear it. Clearing cache button When you click on the button, you get the system window as shown in the next figure where you can easily clear the contents. The Temporary Files window is organized into three sections: Temporary Files, Cache, and Cookies. Cookies are stored files used to store some data to connect to specific websites and keep them from getting logged. Some websites may track and store data about your browsing habits. When you clear the cache, you remove all the temporary files. When you clear the cookies, you remove all the cookies from your computer. As a word of advice: if you're a privacy conscious person, avoid clearing the cache for the reasons explained in the last two sections. Connect to the Internet
